

2-8 head embroidery machine

TFMX-II C Series

The powerful free-arm embroidery machines from the TFMX II-C series are delivered as 2, 4, 6 and 8-head machines. They are designed for embroidering cap goods, tubular goods and borders. The advantages of these machines are high productivity in all areas of application, compactness and light weight. This makes the machines mobile.

The machines produce little noise in operation. The individual applications can be changed within a few minutes. The stitch data are communicated to the machine through a 3.5" diskette drive or directly from the PC via LAN. The stitch data can also be read from a CF memory card.
